

While linear scanners are ideal for certain applications, they generally do not provide the technology needed to do anything other than scan 1D bar codes. As purchasing departments continue to place a greater emphasis on return on investment, enterprises need to choose scanning solutions that deliver superior longevity by meeting current and future scanning needs, lowering the total cost of ownership, and providing functionality such as:

WHAT DO YOU GET TODAY?

Omni-Directional Reading Capability

Unlike laser and linear scanners, area-imagers provide the ability to scan bar codes in any orientation. With omni-directional scanning, tasks can be completed quickly and without wrist-strain.

Ability to Scan GS1 DataBar Codes

Organizations in many industries need to achieve compliance with various GS1 Sunrise initiatives in order to maximize efficiency and maintain positive trade relations. Area-imagers provide single-scan reading of stacked GS1 codes, rather than the complete swipe required by linear scanners.

Ability to Scan Bar Codes on Mobile Phone Screens

As mobile devices have become ubiquitous, clever enterprises are using them as a new way to reach consumers through mobile couponing, ticketing, etc. Advancements in technology have made it possible for area-imaging scanners to read the codes directly off the screen of a mobile device.

WHAT CAN YOU EASILY ADD IN THE FUTURE?

Ability to Scan PDF417 Codes

Enhance existing workflow, or, enable workflow not currently enabled by being able to, for example, extract information directly from the PDF417 code on a driver's license to automatically populate an electronic form and eliminate the need to key-in information. Process more in less time and be sure that the information is correct.

Ability to Read 2D Codes

2D bar codes are becoming increasingly popular across a wide range of industries for many reasons. Some enterprises have a desire to capture large amounts of data despite space constraints, while others are being required to read 2D bar codes due to government regulations or supplier mandates.

BE PREPARED

Even if your enterprise is not yet scanning bar codes off of mobile displays or reading a PDF417 or 2D bar code, select technology now that is capable of being easily with affordable flexible software licensing and eliminate the need to purchase additional hardware in the future. Protect your investment by ensuring that it can grow with you as your scanning needs evolve. UPGRADING YOUR VOYAGER 1400G IS EASY!

Step 1: Call your Honeywell customer service representative and tell them you would like to purchase additional functionality, such as PDF417 or 2D bar code reading, for your Voyager 1400g bar code scanner

Step 2: Provide the Honeywell customer service representative with the serial number of your Voyager 1400g bar code scanner (found on the label affixed to your scanner)

Step 3: The Honeywell customer service representative will email a bar code to you.

Step 4: Scan the bar code in order to enable the new Voyager 1400g functionality!
